

Python Programming Notes

String & Slice

```
In [32]: str = "Aayush is good boy"
str1 = "monty Python"
print(str[0:6])
print(len(str))
print(str[0:6:2])
print(str[-12:-9])
print(str1[-12:-7])
print(str1[::-1])
print(str.endswith("boy"))
print(str.count("o"))
print(str1.capitalize())
print(str.lower()) # same as upper
print(str1.replace("monty", "Aayush"))
print(str1.find("t"))
print(str1.find("TT")) ## give -1 when not found
```

```
Aayush
18
Ays
 is
monty
nohtyP ytnom
True
3
Monty python
aayush is good boy
Aayush Python
3
-1
```

SYNTAX : [including:excluding:skipChar]

- including is Starting Point And Excluding is ending point of string
- set parameter it is set by default 0 [:6:2] it means [0:6:2]
- if skip_char not given it set by default 1 give skip_char > len(str) then it try possible resolve

Negative Parameter

- string start from 0,1... so on and if you want reverse string then give it Negative Parameter
- in above example -1 is "y" so including is -4 and excluding is -2

0	1	2	3	4	5	[6:10]					10	11
M	o	n	t	y		P	y	t	h	o	n	
-12	-11	-10	-9	-8	-7	-6	-5	-4	-3	-2	-1	
[-12:-7]												

- give Skipchar in Negative Parameter it reverse string

List And List Function

In []:
